Rapid Prototyping of Printed Circuit Boards at AFCEA West

Tualatin, Ore., January 2014 — LPKF Laser & Electronics has announced it will exhibit at AFCEA West 2014, which takes place February 11-13 at the San Diego Convention Center in San Diego, Calif. LPKF provides in-house rapid PCB prototyping systems for a variety of applications and will demonstrate its best-selling prototyping system, the ProtoMat S63, in booth 1542.

The ProtoMat S63 is a benchtop milling system that features high spindle speed and feature resolution to quickly and accurately produce printed circuit boards, oftentimes in less an hour. System features such as a fiducial recognition camera and 15-position automatic tool changer assist the user in producing PCBs.

In-house PCB prototyping provides several benefits outsourced prototyping does not, including the ability to rapidly fabricate PCB design iterations. For those working in defense and security such as the attendees of West 2014, in-house prototyping also provides another benefit: the ability to maintain complete user control over design data.

For more information on in-house PCB prototyping, visit LPKF in booth 1542 at AFCEA West 2014 or visit www.lpkfusa.com/pcb-prototyping/.

###

About LPKF

Established in 1976, LPKF Laser & Electronics manufactures milling machines and laser systems used in circuit board and microelectronics fabrication, medical technology, the automotive sector, and the production of solar cells. LPKF's worldwide headquarters is located in Hannover, Germany and its North American headquarters resides near Portland, Ore.
