Goboman Brings Production Back to the USA, using Laser System from LPKF

Los Angeles, CA - Goboman, located in Temecula, CA has recently commissioned an LPKF P6060 laser cutting system for the domestic manufacturing of custom gobos. Gobos are templates that are used to project light patterns of a particular shape. Such devices are used widely in theatrical and event lighting, as well as product advertising. This investment in a sophisticated laser cutting system enables the company to produce highly accurate custom gobos with an instant turnaround, bringing back work that was outsourced to Asia in the past. "We used to outsource our custom gobo manufacturing to the Far East, but most event managers do not have the luxury to wait for a custom gobo. The new LPKF laser system allows us to serve our time critical accounts instantly." said Steve Hoffman, President of Goboman, Inc.

Goboman operates its new laser system in Temecula, CA and is helping to create domestic jobs. Hoffman explains: "The system is extremely easy and safe to operate and has very low energy consumption. All these factors are making the LPKF P6060 ideal to start production in California."

About Goboman:

GoboMan was founded in 2006 by Steve and Rebel Hoffman as the first direct online gobo manufacturer. The company specializes in custom steel gobos of any size. www.goboman.com

About LPKF:

LPKF Laser & Electronics manufactures machines and laser systems used in electronics fabrication, the automotive sector, and the production of solar cells. Around 20 percent of the workforce is engaged in research and development. www.lpkfusa.com
