Stencils Unlimited selects LPKF's Laser Technology

March 12, 2008, Oregon – Stencils Unlimited, Inc. announced today that it has selected LPKF's stencil laser cutting technology, exclusively for the production of all of its SMT stencil products including its highly popular Prototype SMT Stencils and Prototype SMT Foils. These frameless solder paste stencils were specially designed for manual printing in a design and prototyping environment without the need for specialized printing equipment.

Agustin Araujo, President of Stencils Unlimited noted, "The speed and efficiency of LPKF laser cutting systems is critical to allow us to provide prototype stencils with quick turnaround at a price range that is compatible with the needs in the very competitive R&D market. At the same time we cannot compromise quality and accuracy, which makes LPKF Laser & Electronics the best choice for our business model".

About Stencils Unlimited

Stencils Unlimited based in Lake Oswego, OR is North America's largest supplier of frameless prototype stencils focusing on the R&D market. Stencils Unlimited, Inc. also offers laser cut precision parts.
