Move or Copy a Design in CircuitPro

Requirements
1. Circuit Pro version 1.5 revision 164 or higher

Setup:
1. Board design must be processed in Circuit Pro with the toolpaths visible in the CAM view.

Procedure:
1. Go to the machine view.

2. Move board to a new location.
   a. Go to the machining menu and select placement.
b. If creating multiples, change the number of copies to the amount desired in each axis.

c. Enter the spacing between the boards.

d. Press the apply button.

e. Temporarily move the placement window off to the side.

f. Left click on your design. While holding the left mouse button down, drag your design to its new location.

g. Press close.

3. Verify design is over your copper material.

a. In the move to position area, click on the manual move head by mouse icon.
b. Left click on one corner of your design. The milling head will move to this location.

c. Left click on the opposite corner of your design. The milling head will move to this new location.

d. Verify that the project is in the working area as you desired.

e. If necessary, repeat the placement process. (Completing the step and repeat function is not required.)

f. Press the move by mouse icon again to finish this mode.
